Q
- # AUX-Input
- ## Construction instructions for an "AUX input for all Renaults with "Update List" radio
- Cost:**~8€ **Time expenditure:**~15min
- The first step is to check whether the radio is suitable for the "AUX adapter". All Renault radios with the inscription "Update List" on the front panel are generally suitable.
-
- To make sure whether the radio is really capable of this, go to the radio master menu (press the button with the music note) and if the sub-item "AUX" is present in this menu, the radio is suitable.
- Once this is done, the adapter must be built. Material required for this:
1. A built-in socket for 3.5mm jack 3-pin (Conrad. Art. No. 738619 - 62)
 2. A 3-pin cable
 3. A plug "Mini ISO plug green + 10 contacts" (Conrad. Art. No. 378652 - 62)
- Required tool:
1. Stripping pliers
 - 2nd soldering iron
 3. Solder
 4. Pliers for squeezing the wires onto the plug contacts (e.g. sharpening pliers)
- Now the cable is connected to the Mini ISO plug.
-
- Care must be taken to ensure that the contacts are correctly occupied:
- 7-Right
 - 8-Links
 - 9-GND
- The three remaining contacts remain free.
- Now the other end of the cables must be connected to the 3.5mm jack socket. A soldering iron is required for this. The quickest way to insulate the contacts from each other is with a little hot glue. Shrink hose is safer but a bit fiddly.
- Now the radio is being expanded.
- To do this, 2 or 4 nails are pushed through the openings at the radio aperture and the radio is then pulled out.
- Now at the point where the socket will later sit, drill a hole with a 6mm drill and screw the socket into it, then plug the Mini-ISO plug into the radio and reinstall the radio.
- Now that the installation has been completed, all you have to do is activate the input on the radio.
- To do this, go back to the radio's master menu (press the "Music Note" key, scroll to the "AUX" menu item and set the value (using the + and - keys) to "On".
- Wait a moment until the menu closes, select the AUX input, connect the Mp3 player, navigation system or similar and you're done.
